Data publication of the foreign trade statistics

The foreign trade statistics for a relevant month are released in two steps, summary data till 6 week after the end of reference month at the latest and detailed data 74 days after the end of reference month at the latest. The precise release dates are announced on the Internet website of the Statistical Office of the SR in Release Calendar.

Data on value of imported and exported electricity and natural gas are estimated on the basis of data on physical flows.

Data on foreign trade published by the Statistical Office of the SR are compiled based on the **national concept**:

In accordance with internationally effective methodology of presentation of foreign trade statistics, data are published according to the **country of origin** (as for the total import) and the **country of destination** (in the total export).

Values of the total import and total export are compiled as **FOB type values**, i.e. they included a transactional value of goods and value of services (e.g. transport, insurance, transfer, storage of goods etc.) performed to deliver the goods to the border of the exporting country.

Values of goods, which are the subject of temporary admissions and of goods for repair and after repair and the associated replacement parts are not included to the value of foreign trade statistics.

Value of goods, which are the subject only cleared for customs purposes in the Slovak Republic is also not included to the value of foreign trade with non-member countries of the EU (value of quasi imports and exports).

Data on foreign trade of Slovakia published by Eurostat are compiled based on the **EU concept:**

Data are published according to the **country of origin** concerning the import from non-member states and the **country of consignment** concerning the import form the EU member States. The export is released according to the country of destination.

The value of import is compiled as **CIF type value**, where the value of services (e.g. transport, insurance, transfer, storage of goods etc.) performed to deliver the goods to the border of the

Slovak Republic is added to the transactional value of goods. The value of export is compiled as **FOB type value**, i.e. it includes the transactional value of goods and the value of services performed to deliver the goods to the border of the Slovak Republic.

Values of goods, which are the subject of temporary admissions and of goods for repair and after repair and the associated replacement parts are not included to the value of foreing trade statistics.

Value of goods which were only cleared for customs purposes in the Slovak Republic is included to the value of foreign trade with non-member countries (value of quasi imports and exports).
