[Annex - Turnover in retail trade 2009-2023 \(ZIP - 12 kB\)](#)

In 2023, turnover decreased the most in the last 14 years

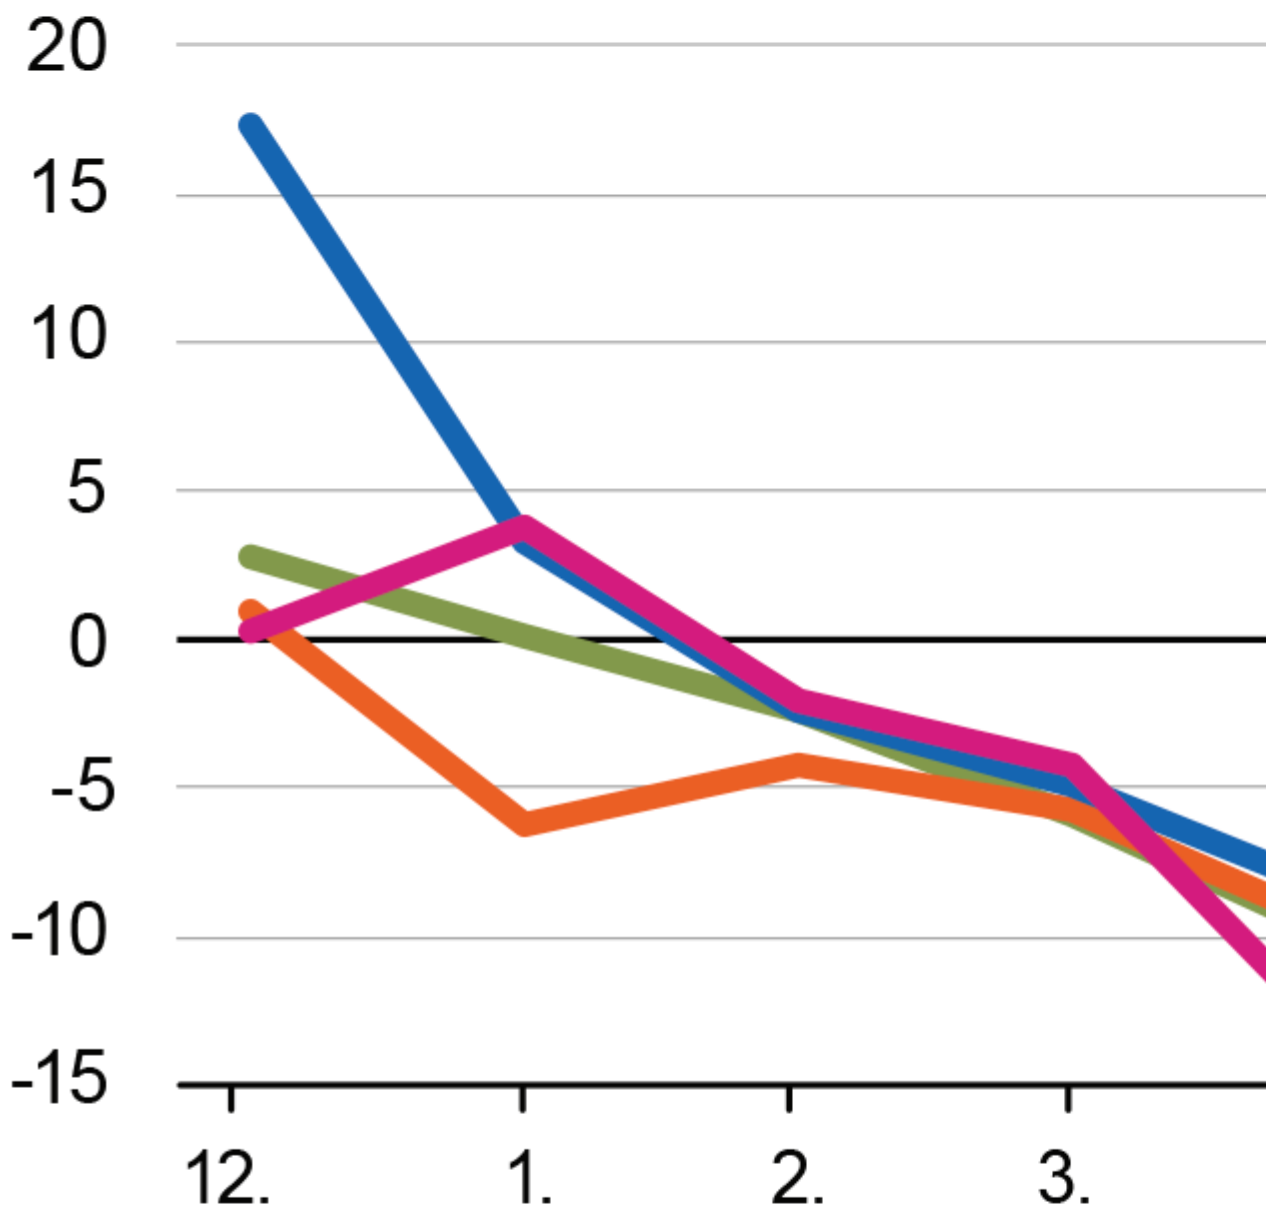

Christmas sales did not affect the retail turnover, it was also lower in December than in 2022. The record annual decline in turnover at the level of 4.5% was due to negative developments in large hyper- and supermarkets and in specialized stores across the entire sector.

In the last month of 2023, **retail turnover**¹⁾ decreased year-on-year by 4%. It was the eleventh consecutive month when turnover after adjustment by inflation on a monthly basis were below last year's level. Up to 7 out of 9 retail components had lower turnover than a year ago. The most significant impact on this result was a double-digit decrease (-11.4%) in e-shops and mail-order sales (sales not in stores, stands and markets). Not even hypermarkets and supermarkets were able to pull Christmas sales to the level of 2022, its turnover decreased year-on-year by 3% in December.
